CamWest, Inc. and CamWest Limited Partnership
Appendix 4-B

Endnotes:

1. MIT
2. This settlement reflects a “no double-dipping” concept. For penalty calculation purposes, at those wells with mechanical integrity violations that are also in violation of another requirement, only one of the violations is cited for a given date of non-compliance. Further, for wells whose periodic requirement to demonstrate mechanical integrity results in a demonstration of no mechanical integrity, a 90-day grace period is honored. Example: if a well is late demonstrating mechanical integrity as of February 1 (violation = late mechanical integrity demonstration), and then on April 1 a mechanical integrity test is performed in which the well fails (violation = failure to establish and maintain mechanical integrity), it is not until July 1 that a penalty for the failure to establish and maintain mechanical integrity violation commences). In this example, on April 1, both violations commence running simultaneously, since the requirement to periodically demonstrate mechanical integrity still has not abated, and the well has lost mechanical integrity. This method is being applied here simply as one approach to a settlement and has no policy or legal merit otherwise.
3. MI = Mechanical integrity
4. PA = plug and abandon
